

WORK EXPERIENCE

Software Development Engineer | Zoom Video Communications

Jul 2022 – Jan 2026

- Designed and operated high-availability Zoom Phone APIs and webhooks across distributed microservices with 99.9% availability.
- Owned core components of Zoom's OAuth 2.0 platform processing 10M+ token requests/day, improving validation logic and distributed scalability.
- Redesigned and automated OAuth provisioning workflows, reducing turnaround time by 99%+ from days to minutes.
- Built a pub-sub pipeline using an internal Kafka-based event streaming platform to automate OAuth scope propagation across services.
- Migrated OAuth scope storage from S3 to MySQL with sub-10ms cached reads, reducing lookup latency by ~90% through feature-flagged rollout.
- Rebuilt OAuth 2.0 Client Credentials Grant with least-privilege scope validation, preventing over-privileged token issuance.
- Built an internal AI-powered agent for troubleshooting OAuth production issues, enabling automated log analysis and root-cause summarization.
- Co-developed a full-stack internal API development, testing, and debugging platform for Open APIs, reducing third-party tooling costs by over \$100K annually.
- Served as a Security Champion for Marketplace engineering teams, contributing to secure design reviews and engineering best practices.
- Designed observability dashboards, alerts, and SLIs/SLOs to maintain 99.9%+ production availability.

Software Development Engineer Intern | Amazon

Jun 2021 – Sep 2021

- Built a modular plugin for Amazon's Item Pipeline Workflow to publish merchant contribution entities through Amazon SNS for downstream consumers.
- Refactored Java services to support more flexible and decoupled workflows.
- Contributed to a high-throughput distributed data processing system with strict latency and reliability constraints.

TECHNOLOGIES

- Languages: Java, Python, JavaScript
- Backend: REST APIs, Spring Boot, Microservices, Distributed Systems, Event-Driven Architecture, Maven
- AI: AI Agents, LLM Workflows
- Frontend: React, HTML/CSS
- Messaging: Kafka, Pub/Sub, Amazon SNS
- Security: OAuth 2.0, PKCE, Authorization, Scope-Based Access Control
- Databases: MySQL
- Cloud: AWS (S3, RDS, SNS)
- Observability: Grafana, Elasticsearch, Logging, Metrics, Dashboards, PagerDuty
- Testing / Tools: JUnit, Mockito, Git

EDUCATION

University of California, Irvine | B.S. Computer Science
